I'm starting the AWS Networking Series!

coranchunilall7@gmail.com

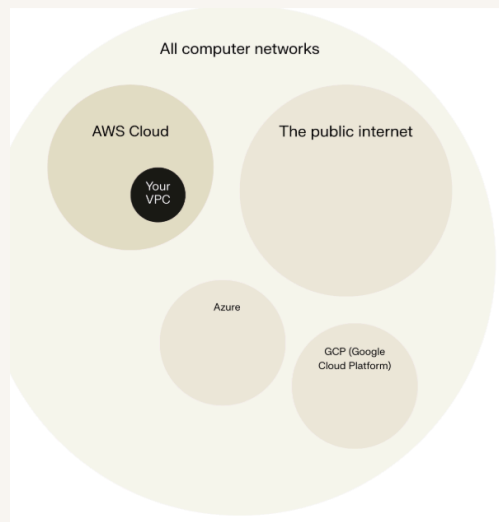

I'm building a cloud networking architecture

In this hands-on networking series, I'm learning about Networking. By the end of the 9 projects, I will have a clear understanding about Networking. I'm learning about cloud networking because i want to enhance my knowledge of networking

Businesses traditionally had to purchase servers and IT specialist. Cloud networking changed things by maintaining their own servers where you only pay for data transfer

Excited to share my progress - build a VPC with me!

I will set aside 1 hour every week to work on this networking series. I will keep myself accountable by setting deadlines My reward is completing this project

What are networks?

A computer network s a collection of devices that can exchange data packets. These data packets travel between devices using IP addresses as destinations.

What is a VPC?

A VPC is like your own private section of the AWS network where you can control the flow of network traffic in and out of AWS resources This helps organizations by enhancing security, Custom network control and faster development and deployment
